Email Invoice Capture

Automatically capture, classify, and extract invoice data from emails with 95% accuracy - reducing manual effort and accelerating processing with self-learning AI agents.

3-Way Matching

Auto-match invoices with POs and GRNs to detect price, quantity, and tax variances - streamlining approvals and ensuring accurate payment with minimal manual intervention.

Non-PO GL Coding

Predict and apply GL codes and accounting dimensions to non-PO invoices using AI - ensuring compliant expense allocation and reducing back-and-forth with business users.

The Challenges

Accounts Payable teams face growing pressure to process invoices faster and more accurately. Yet manual tasks, limited visibility, and compliance hurdles continue to slow them down.

Error-Prone and Labor-Intensive Data Capture

Manually capturing invoice data from formats like PDFs, images, or paper is error-prone and time-consuming. Most AP tools can't handle complex data extraction accurately, leading to inefficiencies.

Manual Invoice Processing

Processing invoices manually involves multiple repetitive steps, including data entry, matching with POs, and handling exceptions. This slows the cycle, increases workload, and elevates the risk of fraud.

Complexity in Exception Resolution

Resolving invoice exceptions often requires manual coordination between AP, procurement, and business units. The lack of automation causes delays, confusion, and inefficient approvals.

Time-Consuming AP Email Management

AP teams spend a large portion of their day sorting and responding to supplier emails—ranging from invoice submissions to payment status inquiries—taking focus away from critical tasks.

Lack of Visibility into AP Performance and Spending

Without access to real-time AP metrics like invoice aging, exceptions, or spending trends, teams struggle to identify bottlenecks, improve performance, or find cost-saving opportunities.

Ever-Evolving Tax and Compliance Requirements

Keeping up with global tax and compliance rules is complex. Misapplied tax rates or calculation errors can lead to penalties, audit risks, and reputational damage.

The Solution

Along with the top modules – **Email Invoice Capture, 3-Way Matching, and Non-PO GL Coding**, HighRadius offers the following agents to help you overcome the challenges within your AP processes.

AP Email Inbox

Organize and classify supplier emails into categories like invoice submission, credit notes, queries, etc., and leverage AI agents to generate draft responses – significantly reducing the time spent by AP teams on email management.

ERP Invoice Posting

Post approved invoices to your ERP in real-time or batches with full master data validation, auto-error resolution, and real-time payment status updates—ensuring seamless, end-to-end processing.

Invoice Approval

Automate multi-level invoice approvals based on thresholds, policies, or master data—reducing delays and manual follow-ups while ensuring compliance and faster processing.

Supplier Statement Recon

Automatically match supplier statements with ERP records, flag discrepancies, and communicate status updates—eliminating manual reconciliation and reducing supplier inquiries.

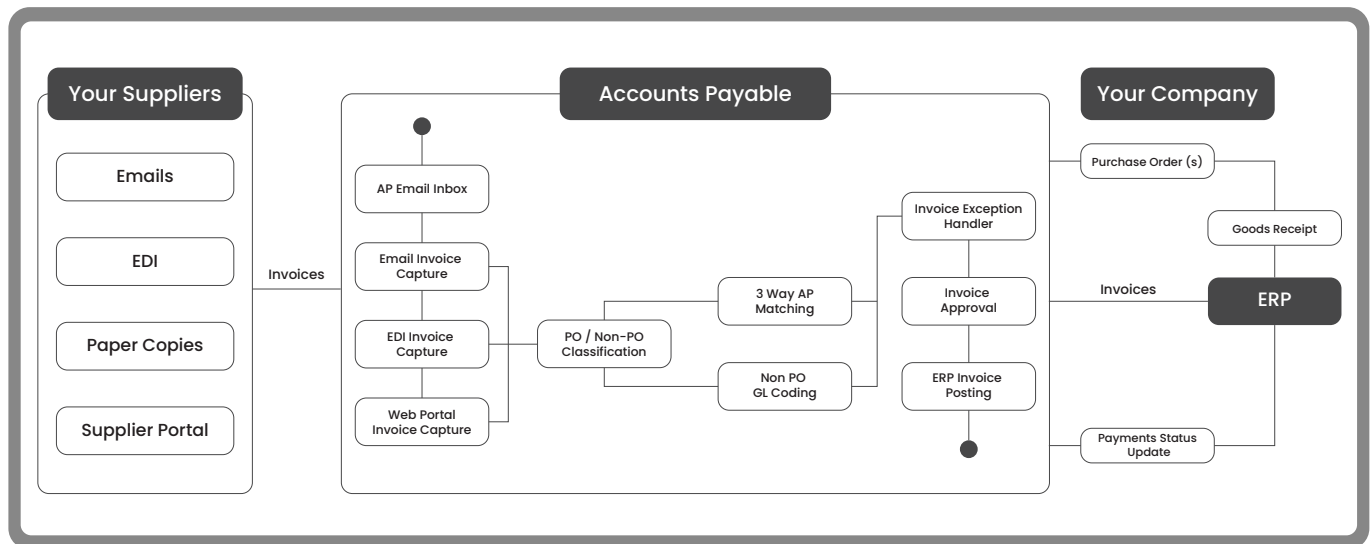

Exception Resolution Workflow

Route exceptions to the right approvers based on logic and roles, enabling collaborative resolution and faster cycle times across departments.

Discount Calculation

Identify and prioritize early payment discounts with Agentic AI-driven due date and amount predictions—helping AP teams capture savings and optimize working capital.
